

# BEVELING TOOLS

## Cutting Edge Technology.

Beveling gives you a sound welded joint with optimum amount of weld in place for maximum strength.

Rounded edges of metal surfaces gives you proper thickness of coatings and avoid not only corrosion but protects edge from chipping.

Carbide Inserts.

LSB38

GTB 25

### LSB38 S085

LSB 38 is an excellent combination of power, design, durability and ergonomics for chamfering, deburring and giving radius edges to metal plates in stainless steel, mild steel and aluminium. Mills contours and cutouts in carbon steel, stainless steel, and aluminum with adjustable depth control.

3 indexable carbide inserts for beveling and a standard 45° milling head is included.

### GTB 25

GTB 25 is a portable beveling machine built upon a patented turbine technology air motor. An excellent combination of power, precision and perseverance. Ergonomic for the operator, efficient for your results. Mills contours and cutouts in carbon steel, stainless steel, and aluminum with adjustable depth control.

4 indexable carbide inserts for beveling and a standard 45° milling head is included.

### Features

- A** Guide bearing designed to suit the specific operation gives perfect finish to beveled or radius edge.
- B** Milling head @45° made of special alloy to get best power to weight ratio.
- C** Low clearance compact head to get better accessibility and stability of operation.
- D** Built-in spindle lock for the ease of changing guide bearing and carbide inserts with just one tool.
- E** Powerful, 1.3 kW, proven air motor with efficient speed governor.
- F** Rear exhaust to effectively direct air away from operator.
- G** Safety lever to help operator avoid unintentional start of tool.
- H** Ergonomically designed support handle to give controlled and comfortable operation.
- I** Easy to read scale in Metric and Imperial for fine adjustment of bevel width and radius.
- J** Carbide insets with eight cutting edges gives unmatched productivity.
- K** Powerful, 2.5 kW turbine motor.

Air preparation units.

## Stronger joints that last

In fig.1 you see a fragile joint without beveled edges, showing path of force through weak areas. In fig.2 a weld preparation showing a uniform and linear path of force with a strong and secure joint.

Fig. 1

Fig. 2

## The edge of things

Rounding of edges takes away sharp edges from the manufacturing process. This gives evenly coating thickness and prevents chipping. Giving the piece better corrosion resistance and burr-free edges. On a sharp edge underlying corrosion may not be visual because thick coating is relatively hard and will act as a shield.
